

DPMS AP4 SPC PANTHER CARBINE RFA2-AP468 6.8 SPC, \$1114

GUN TESTS GRADE: F

When dry firing, the trigger felt superior. But when live-fired, it would not reset. Accuracy was mediocre compared to the Stag, which turned off our testers.

The removable carry handle added versatility but without compromising sight picture. The DPMS rear sight unit was sturdy and precise.

The single-stage JP Enterprises trigger is a \$124 upgrade available on most DPMS models. It is a favorite with competitive action shooters. But without apparent reason, our trigger doubled and would not reset after each shot.
