

## HI-POINT MODEL CF .380, \$135

Gun Tests grade: C+

The somewhat ungainly Hi-Point Model CF cuts an interesting figure with its two-tone finish. We found the gun to be totally reliable, as usual, but top-heavy and with a too-slick grip.

### SPECIFICATIONS

GRIP CIRCUMFERENCE (MAX).....	5.5 IN.		
FRAME MATERIAL/FINISH.....	GRAY PLASTIC		
BARREL .....	STEEL		
SLIDE.....	MATTE-BLACK POWDER-COATED STEEL		

The fully adjustable sights of the Hi-Point gave a decent and highly visible sight picture. There were three bright red dots, which look bland in this b/w photo, but grabbed the eye well, even in dim light. The rear is fully adjustable, but we didn't have to move it.

The safety lever, trigger, and magazine release are the only controls on this minimal but effective handgun. There is a 10-round magazine optional, and also a compensated version. The latter would hardly be necessary, as the heavy slide kept kick to a minimum.
