The straight-pull bolt offered greater rapid-fire capability, and this made the gun more fun to shoot, in our view.

The classic buttplate finished off the Monte Carlo stock. Its plastic construction helped when shouldering the rifle quickly. But if it wasn't held tightly in the shoulder pocket, it tended to slide around when the shooter cycled the bolt.

Right: Browning's Double Helix rotary magazine was easy to load and included a wheel to assist loading. The visual appeal of its transparent body was one more feature that made it enjoyable.
