The grip was specially built for the Raging Bull frame. It was the only supplied grip among our test guns that lent both proper support and protection to the shooter's hands.

Porting, an aftermarket modification that can cost well over \$100, contributed to comfort and control. The plain front sight was easy to read.

Lockup was enhanced by a second detent in the yoke. To release the cylinder the forward latch had to be moved upwards and the rear latch pushed forward, simultaneously.
