

HARRINGTON & RICHARDSON PARDNER NPI2C8 12-GAUGE PUMP SHOTGUN, \$200

GUN TESTS GRADE: A

A shotgun with good features for the price. The fit of all parts was tight and the ability to mount a scope might be important. The blued-steel-and-walnut cosmetics weren't bad. The tight fore end was an advantage, but the superior safety made a real difference to our team.

Above: The stock to metal fit of the Pardner was good and the stock well contoured of good wood.

Above: The location of the cross bolt safety was ideal according to some of our raters. It certainly beat the Maverick.

Far Right: An advantage of the Pardner is the ability to use scope mounts without the expense of custom drilling and tapping. **Right:** The single front bead of the Pardner provided a good aiming point. The eye is the rear sight.
