

FNH-USA FIVE-SEVEN USG FDE HANDGUN 3868929232 5.7X28MM, \$1039
GUN TESTS GRADE: B

The FNH 5.7 single-action autoloading pistol fires the low-recoil 5.7x28mm cartridge, making it a good choice for personal protection, target shooting, or NRA Tactical Police Competition. The gun suits lefties and righties with a reversible magazine release and ambidextrous manual safety levers. There's a lot to like here, but our shooters thought the Kel-Tec was better in several areas.

SPECIFICATIONS

Overall Length.....	8.2 in.
Barrel Length.....	4.75 in.
Twist Rate.....	1:9 RH, 8 Grooves
Sight Radius.....	6.8 in.
Overall Height.....	5.7 in.
Front Strap Height.....	2.4 in.
Back Strap Height.....	3.5 in.
Weight Unloaded.....	24.2 oz.
Weight Loaded (21 rds 40-gr).....	27.8 oz.

Accessories.....	Manual, Lock, Fitted Hard Case
Warranty.....	Limited Lifetime
Telephone.....	(703) 288-1292
Website.....	www.FNHUSA.com
Made In.....	Belgium

The slide release, right arrow, pushes downward to close the slide. The reversible magazine release, bottom arrow, is large and easy to operate. There is a special tool provided with the pistol to reverse the mag release, if you so desire. The process isn't that difficult, either. The safety, front arrow, is in an unusual place above the trigger guard. We preferred the location of the safety on the Kel-Tec.

The 5.7, right, is loud, but no more so than other centerfire defensive cartridges. Both it and the PMR-30, left, create big muzzle flashes. We thought it odd that the 5.7 pistol is not offered with a threaded barrel to attach a suppressor. That would be welcome indoors.

Right: The 5.7 USG came in a black-plastic hard case with tools, lock, and three 20-round magazines, one of which appears at right. They were completely reliable.
