

WINDHAM WEAPONRY VEX-SS VARMINT EXTERMINATOR #R20FSSFTSKV 223 REM., \$1295

GUN TESTS GRADE: D+

The magazine was a little sticky. The trigger was gritty. Rounds tended to drift up and to the right as the barrel heated up. We had failures to function and poor accuracy with both the TulAmmo and Federal ammunition.

Action	Semi-Auto Gas Impingement, Carpenter 158 Steel Bolt	Upper Receiver	M4A4 Type Flat-Top; w/Optics Riser Blocks
Overall Length	38.25 in.	Lower Receiver	Forged 7075-T6 Aircraft Alum.;

		Website	WindhamWeaponry.com
		Made In	Windham, ME

The gas block had a rail onto which one of the two supplied riser blocks could be affixed. They were for an optic.

The stock consisted of a foam-covered upper tube and a smaller tube that formed a triangular brace. Our shooters thought it was very comfortable.

The WW's rubber buttpad was soft and contoured for good shoulder fit. The sling attachment made carrying in the field easy.

The forend was a free-floated, vented aluminum tube.

The Hogue rubber pistol grip featured a pebbled surface and finger grooves for a solid grip.
